	Contents	Page No.
	Synopsis	i
	About the Author	v
	Acronyms and Abbreviations	vi
	Acknowledgment	vii
Chapter 1	**Radiobiology of Radiotherapy**	
	1.1. Background	1
	1.2. External Beam Radiation Therapy (EBRT)	1
	1.3. Definition of contouring volumes before planning	2
	1.4. Types of treatment techniques in EBRT	3
	1.5. Plan evaluation	4
	1.6. Dose volume histogram (DVH)	4
	1.7. Basic radiobiology	5
	1.8. Radiobiological models	11
	2. Review of Literature	16
	3. Aims & Objectives	19
	4. Conclusion	20
	References	20
Chapter 2	**Role of Plan Evaluation Indices, Chronological Development and Dosimetrical Comparison**	
	1. Background	22
	1.1. Conformity index	22
	1.2. Homogeneity index	25
	2. Material and Methods	27
	2.1 Plan comparison criteria	30
	3. Result	30
	4. Discussion	34
	5. Conclusion	35
	References	36
Chapter 3	**Development of an Indigenous Radiobiological Model Based TCP and NTCP Estimation Software for Routine Plan Evaluation in Clinics**	
	1. Background	38
	2. Material and Methods	39
	3. Radiobiological models	39
	3.1. Niemierko EUD or Logit model	39
	3.2. Lyman-Kutcher-Burman model	40
	3.3. TCP model based on Poisson statistics	41
	3.4. Weibull distribution model	41
	3.5. Logistic Model	41

4. Application Architecture 42
5. Results 45
6. Discussion 50
7. Conclusion 51
References 52

Chapter 4 **Problem Based Application of Developed Program for TCP & NTCP Estimation**

1. Background 54
   1.1. Myth 54
   1.2. Facts 54
   1.3. Scope of revision 55
2. Material and methods 57
3. Results
   3.1. Possibilities of dose escalation 59
   3.2. Possibilities of achieving planning gain 60
4. Discussion 60
5. Conclusion 62

References 63

Chapter 5 **Role of Overall Treatment Time in Radiotherapy Management of H&N Cancer**

1. Background 64
2. Material and Methods 65
3. Result 68
4. Discussion 72
5. Conclusion 74

References 74

Chapter 6 **Clinical Validation of Radiobiological (RB) Models**

1. Background
   1.1. DVH versus RB model based plan evaluation 76
   1.2. Clinical validation 76
2. Material and methods 77
   2.1. Radiotherapy technique 78
   2.2. Toxicity grading in organ at risk (OAR) 79
   2.3. Patient reported QoL evaluation 82
3. Result
   3.1. Correlation analysis 83
   3.2. Curve fitting and parameter estimation 86
   3.3. RB model accuracy calculation 88
4. Discussion 90
5. Conclusion 92
